

Inadequate Causes of Death

(The causes of death listed below must be accompanied by an underlying cause of death when listed on a death certificate)

acute abdomen	distress, adult respiratory	hypothermia, unspec.
age, (unk)(any)	dysphagia	hypoxia
altered mental status	dysrhythmia	immaturity
Anorexia	dysrhythmia, cardiac	immunosuppression
Anoxia	edema	increased intracranial pressure
Anuria	edema, cerebral	insufficiency, pulmonary
arrest, cardiac	edema, pulmonary	jaundice
arrest, cardiopulmonary	effusion, pleural	loss, weight
arrest, cardiorespiratory	exhaustion	natural causes (unk)(unspec.)*
arrest, respiratory	exsanguination	nonviable
Arrhythmia	failure to thrive	paraplegia
Ascites	failure, any organ	prematurity
Aspiration	failure, central nervous system	quadriplegia
Asystole	failure, heart	rapid heart beat
Bacteremia	failure, heart, congestive	seizures
Bedridden	failure, hepatic	senescence
Bradycardia	failure, liver	senile debility exhaustion
Cachexia	failure, multi organ	senility
Coagulopathy	failure, multi system	shock
Corra	failure, respiratory	shock, cardiogenic
Convulsions	fever	shock, hypovolemic
death, cardiac	fibrillation, atrial	shock, septic
death, neonatal	fibrillation, ventricular	shock, unspec.
debility, senile	gangrene (incl. of site)	shutdown of specified organ(s)
debility, unspec.	hemothorax	slow heart beat
Decubiti	HIV positive	state, chronic bedridden
Dehydration	homeostenosis	sudden death
depletion, volume	hyperglycemia	syncope
Diarrhea	hyperkalemia	tachycardia
difficulty feeding	hyponatremia	vomiting
dissociation, electromechanical	hypotension	weak heart
		Intracerebral hemorrhage
		Subarachnoid hemorrhage
