Sepsis SIRS Screening BPAs

Nursing BPA and Screening BPA

To capture and identify possible sepsis patients, the following screening BPA has been build into Epic ASAP. This BPA will trigger with 2 abnormal vitals out of the following vital signs:

- 1. Pluse
- 2. Pluse Ox
- 3. Systolic BP
- 4. Temperature
- 5. Respiratory Rate

When triggered it will allow the nurse to procede to a spepsis screening section to capute additional information to further access if the patient meets SIRs criteria.

涉 Try It Out

1. When 2 out of 5 screened vital signs are abnormal the follow BPA will present.

This Patient	s at risk for Sepsis. Proceed to Sepsis Screening	Questions using the link below	
Filed Vitals:			
	09/30/15 1833		
BP:	60/40		
Pulse:	110		
5 Go to Se	osis Screening		

2. This will allow you to link to the sepsis screening section.

Sepsis Screening		
Time taken: 1833 💿 9/	0/2015 Values By	
≂ 1		
🗢 Sepsis Screening		
Recent history of fever or chills?	D Ves No	
Does the patient have a known infection or signs/symptoms of a new infection?	D Weil No	
Does the patient have altered mental status from baseline?	D West No	

3. If the screening questions are awnsered Yes, the following BPA will trigger

Filed Vitals:	1823				
00	1.000	30/15 1833			
BP: Pulse:	60/				
1 0130.
