Verifying that the patient is in the correct bed in OBIX May 30, 2017

Important: Ensure the patient is in the correct OBIX bed **before** starting the fetal monitor to maintain the integrity of the tracing for quality assurance purposes.

Procedure:

- 1. Before starting EFM, select patient in Epic and open the chart.
- 2. From the Activity toolbar, click "Start OBIX" button to launch the system.

3. When OBIX launches, go to "Patients" menu and select "In Unit".

4. The following screen should appear.

🔏 TESTING, TEST / MRN:E106276194 / DOB:02-01-2002 / ACCT: / START: 08-16-2016 - OPEN

ļ	Unit JH-ZB Patients In Bec	08E	*				
	Bed	Name	Medical Record Number	Date Of Birth	Account Number	Matched	
	050	TESTING, TEST	***E106276194	02/01/2002	1176691950 (1176691950)		

- Find your patient bed on the list by scrolling and verify that Bed, Name, MRN, DOB and Account Number match Epic's bed and location and demographics. Also, a check mark (√) should be in the column titled "Matched." It is <u>CRITICAL</u> that the OBIX and Epic bed assignments are identical.
- 6. After you verify that the patient is admitted to an OBIX bed, turn on the fetal monitor to begin capturing the fetal tracing.
